4.1 Other site characteristics

Soil & geology:

Acidic, Nutrient-poor, Peat

Geomorphology & landscape:

Lowland

4.2 Quality and importance

ARTICLE 4.1 QUALIFICATION (79/409/EEC)

Over winter the area regularly supports:

Anser albifrons flavirostris
(Greenland/Ireland/UK)

4.4% of the GB population
Count, as at 1984

ARTICLE 4.2 QUALIFICATION (79/409/EEC)

4.3 Vulnerability

The site has previously been under significant pressure from peat extraction for fuel and distilling purposes and may be again in the long-term. This threat is currently addressed through medium to long-term management agreements. Disturbance to night-roosting birds through development of an adjacent wind-farm is a potential threat and this issue is being dealt with through the planning system.

5. Site protection status and relation with CORINE biotopes:

5.1 Designation types at national and regional level

Code	% cover
UK01 (NNR)	62.3
UK04 (SSSI/ASSI)	100.0
